Data Analysis Internship

Level 2

Task 1: Restaurant Ratings | Task 2: Cuisine Combination | Task 3: Geographic Analysis |
Task 4: Restaurant Chains

Dataset: Zomato Restaurant Dataset (9,551 restaurants)

Task 1: Restaurant Ratings

Objective: Analyze the distribution of aggregate ratings, find the most common rating range, and the average number of votes.

Result

Rating Range	Number of Restaurants
0 (Not rated)	2148
1-2	10
2-3	1891
3-3.5	2502
3.5-4	1886
4-4.5	908
4.5-5	206

Most common rating range: 3 - 3.5 (2,502 restaurants).

Average number of votes received per restaurant: 156.91.

Insight: A large cluster of restaurants (2,148) have no rating at all, which likely reflects new or low-traffic listings. Among rated restaurants, ratings cluster around the 3-4 range, indicating most restaurants are perceived as average to good rather than excellent or poor.

Task 2: Cuisine Combination

Objective: Identify the most common cuisine combinations and check if certain combinations have higher ratings.

Most Common Cuisine Combinations

Cuisine Combination	Count
North Indian	936
North Indian, Chinese	511
Chinese	354
Fast Food	354
North Indian, Mughlai	334
Cafe	299
Bakery	218

North Indian, Mughlai, Chinese	197
Bakery, Desserts	170
Street Food	149

Top-Rated Cuisine Combinations (min. 5 restaurants)

Cuisine Combination	Average Rating
North Indian, European, Mediterranean	4.46
Burger	4.45
Modern Indian	4.35
Indian	4.25
International	4.23
Italian, Pizza, Sandwich	4.22
Steak	4.19
French	4.19
Cafe, Bakery, Desserts	4.17
Cafe, Italian, Continental	4.15

Insight: Single-cuisine or niche combinations (Burger, Modern Indian, International, French) tend to achieve higher average ratings than the most frequent combinations, which are dominated by mainstream, high-volume categories like North Indian and Chinese. This suggests specialization may correlate with quality perception, though sample sizes for niche combos are smaller.

Task 3: Geographic Analysis

Objective: Plot restaurant locations using longitude/latitude and identify patterns or clusters.

Top Countries by Restaurant Count (Country Code)

Country Code	Restaurant Count
1	8652
216	434
215	80
30	60
214	60

Top City Clusters

City	Restaurant Count
New Delhi	5473
Gurgaon	1118
Noida	1080
Faridabad	251
Chaziabad	25

Insight: The scatter plot shows a dense cluster of restaurants around a narrow longitude/latitude band corresponding to the Delhi NCR region (New Delhi, Gurgaon, Noida, Faridabad), with a scattering of smaller international clusters elsewhere on the globe. This confirms the dataset is heavily weighted toward Indian restaurants, particularly the National Capital Region.

Task 4: Restaurant Chains

Objective: Identify restaurant chains in the dataset and analyze their ratings and popularity.

Number of restaurant names appearing more than once (chains): 734

Top 10 Chains by Number of Outlets

Restaurant Chain	Outlets	Avg Rating	Total Votes
Cafe Coffee Day	83	2.42	2428
Domino's Pizza	79	2.74	6643
Subway	63	2.91	6124
Green Chick Chop	51	2.67	964
McDonald's	48	3.34	5291
Keventers	34	2.87	1263
Pizza Hut	30	3.32	4961
Giani	29	2.69	854
Baskin Robbins	28	1.86	428
Barbeque Nation	26	4.35	28142

Insight: While Cafe Coffee Day has the most outlets, its average rating (2.42) is relatively low. Barbeque Nation stands out with far fewer outlets (26) but the highest average rating (4.35) and by far the most total votes (28,142), indicating strong customer engagement and satisfaction despite a smaller footprint — quality over quantity.
